SK Hynix

CPU demand emerging as another driver

Target price and valuation

We lift our target price for SK Hynix to W2,000,000 (from W1,660,000), applying a target P/B of 3.4x—the average multiple of global pure memory peers—to our 12-month forward (vs. 2026F previously) BPS of W601,967. The company has moved beyond the stage where growth rates are the primary focus; with ROE nearing the 90% level and the stock still trading at only 2x P/B, market attention should instead shift to the sustainability of high margins.

Through 1Q26, margins surged as sharp ASP growth coincided with limited shipments (which constrained costs). From 2Q26, shipments are expected to increase, supporting top-line growth. While the pace of improvement may gradually moderate, margin expansion is likely to continue. We expect operating profit to reach W64.4tr (+71% QoQ) in 2Q26, W279tr (+492% YoY) in 2026, and W459tr (+61% YoY) in 2027.

Next drivers: CPUs and LPDDR

The eighth-generation TPUs (8t and 8i) unveiled by Google on Apr. 22 further highlight the growing importance of memory. The 8t TPU (for training) increases HBM3E capacity to 216GB from 192GB in the previous Ironwood generation. Similarly, the inference-optimized TPU 8i features 288GB of HBM3E—a 50% increase—and triples on-chip SRAM to 384MB, underscoring the deepening reliance on memory in inference workloads.

At the same time, clear signs of robust CPU demand are emerging. On Apr. 24, Intel reported 1Q26 data center and AI revenue of US\$5.1bn (+7% QoQ), beating expectations, and noted that its server CPU prices have risen more than 20% since March. As AI workloads shift from training to inference and then to agentic AI, more CPU resources are required alongside GPUs, with the GPU-to-CPU ratio moving from 8:1 to 4:1 and potentially to 1:1 or higher.

In agentic AI, orchestration tasks—such as controlling workflows, sequencing operations, calling external APIs, and coordinating between multiple agents—are the domain of the CPU rather than the GPU. Notably, Nvidia recently introduced a standalone Vera CPU rack optimized for CPU-intensive workloads, while Meta signed an agreement to procure tens of millions of Amazon Graviton CPUs.

Robust CPU demand translates directly into increased demand for conventional DRAM (DDR and LPDDR). Notably, as Nvidia transitions its CPU lineup from Vera to the next-generation Rosa (tentatively named), the likelihood of LPDDR6 adoption is increasing. At the 2026 International Solid-State Circuits Conference (ISSCC), SK Hynix showcased its 16Gb LPDDR6 DRAM based on the 1c nm process, achieving data transfer speeds of up to 14.4Gb/s per pin.
